

Wig Sales & Profit Analytics

Data Dictionary

Purpose

This dictionary defines the fields used in the wig-sales analytics project and explains their role in the analysis.

Field	Description	Data Type	Example / Use
S/N	Transaction or record number.	Integer	1, 2, 3...
Customer Name	Name associated with the transaction.	Text	Customer name
Wig Purchased	Category/type of wig purchased.	Text / Category	Closure Wig
Quantity	Number of wig units purchased in the transaction.	Integer	1, 2, 3...
Selling Price	Price charged per wig unit.	Currency	■190,000
Cost Price	Cost of the wig per unit to the business.	Currency	■145,000
Purchase Date	Date on which the transaction occurred.	Date	Short date
Revenue	Total sales value generated by the transaction.	Currency	Quantity × Selling Price
Total Cost	Total product cost associated with the transaction.	Currency	Quantity × Cost Price
Profit	Profit generated after subtracting total cost from revenue.	Currency	Revenue – Total Cost
Profit Margin	Profit expressed as a percentage of revenue.	Percentage	Profit ÷ Revenue

Analysis Usage

Wig Purchased was used to compare product performance. Quantity identified best-selling products, while Revenue and Profit evaluated financial contribution. Purchase Date was used to analyze quarterly revenue trends.

Dataset Note

This is a fictional practice dataset created for educational and portfolio demonstration purposes. Customer and transaction information does not represent real business records.
